

Librem 16

Quick Start Guide

Welcome to your Librem 16

This document will help you get started with your Librem 16.

1. Power on the laptop

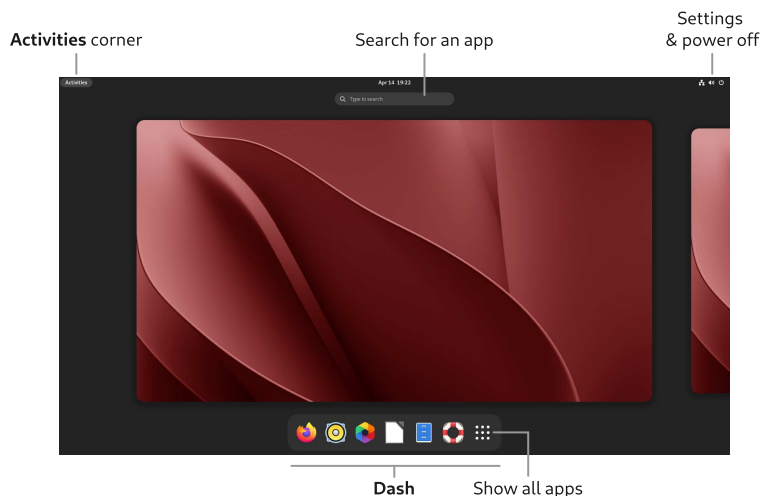

Attach the power adapter to mains power and to one of the **USB-C** ports of the Librem 16 to charge the battery. Press the **power button** to start the laptop.

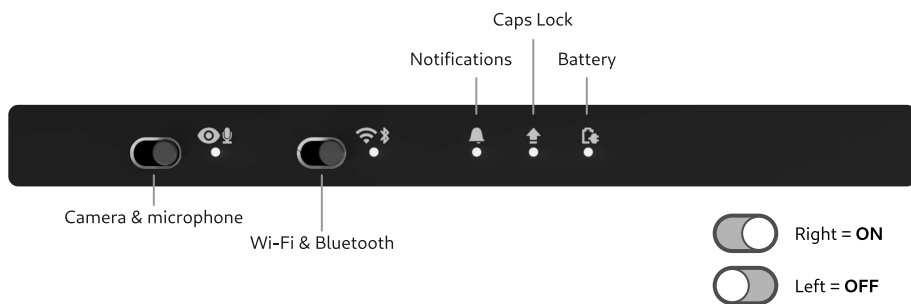

2. Start using PureOS

Follow the instructions on the screen to personalize your installation of PureOS. No personal information is required during the setup of PureOS.

Once the setup is complete, you can use the **Dash** to open an application. Then, just use the **Activities** hot corner to bring back the Activities overview with the Dash.

Hardware Kill Switches

With the hardware kill switches, you can make sure that your privacy is protected. When a kill switch is OFF, the corresponding components are physically disconnected and cannot operate. Switch it back ON to use it again.

Please refer to our documentation to learn more about using your Librem 16:
