

Librem PQC Comms Server

A complete Post Quantum Cryptography (PQC) communication solution

- The PQC Comms Server is fully hosted **In-Domain** and **On-Premise**. It is **Network Agnostic**. Once installed on your network, it lets you connect client devices for **Quantum Safe** communications.
- Easily deploy and manage laptops, tablets, and phones on your own private network—self-hosted or cloud-hosted **fully under your control**.
- You control everything, including the cryptographic keys, the devices, the SIMs, and the network, creating an **easy-to-deploy** drop-in private PQC solution.
- Purism's **Made in USA** Liberty Phone — as your secured end device — encrypts all data and communication with the latest (published August 2024) [NIST Standard FIPS 203 for post-quantum cryptography](https://nist.gov/pubs/fips/fips-203.pdf), enhanced by the fact the secret never leaves the phone.
